SDE-3 Angel One | Ex - LocoNav | Ex - MindTickle
Nagpur, Maharashtra, India

Summary

I am currently working at Angel One as SDE-3 in frontend.
I have done my B. Tech. in IT from IIIT Allahabad.

I love gaming, cartoons, and comics a lot. My first love as a gamer was Counter-Strike. I read a lot of comics and manga. Recently I have started playing DOTA 2 and I love it. My favorite cartoon is Tom and Jerry. They always crack me up. I love T.V. series and am an avid movie watcher. I never miss any of the comic book movies.

Web development is my passion. I have been doing development since my first year and I have loved it more and more as I kept working on it. Last year I have started dipping my toes in back-end development. I have worked in MEAN stack and am improving my knowledge regarding it.

My favorite language is JavaScript. It has been the life of the front end for many years and recently has started growing also as a back end. I will not say that I am an expert in it but I am definitely not a novice.

Experience

Angel One

2 years 11 months

SDE-3

July 2023 - Present (2 years 11 months)

Bengaluru

Software Engineer

July 2023 - Present (2 years 11 months)

Led the architecture and development of a centralized Risk UI platform, consolidating multiple risk workflows into a unified system used across trading, compliance, and operations teams. Built and scaled low-latency, real-time

trading interfaces using WebSockets, enabling faster decision-making for critical financial operations. Designed and implemented a fine-grained RBAC system, enforcing secure, role-based access across high-risk financial actions and ensuring compliance with regulatory standards. Migrated authentication from localStorage to HTTP-only cookies, significantly improving application security and reducing exposure to XSS vulnerabilities. Established frontend engineering standards (Svelte architecture, reusable components, shared utilities), improving developer onboarding time and increasing team velocity. Engineered complex order and risk management systems capable of handling exchange-level rules, product variations, and compliance constraints at scale. Improved system reliability by introducing monitoring dashboards, observability tooling, and optimized server configurations, ensuring high availability. Strengthened CI/CD pipelines with automated quality gates, reducing production defects and improving release confidence.

LocoNav

Senior Software Engineer

June 2022 - June 2023 (1 year 1 month)

Delivered multiple production-grade features by driving cross-functional collaboration across product, backend, and design teams, ensuring predictable and timely releases. Built a geospatial fleet analytics platform using Google Maps APIs, transforming raw location data into actionable insights for logistics operations. Led migration of legacy frontend systems to Next.js, improving performance (SSR), SEO, and maintainability. Standardized frontend architecture, improving code consistency, scalability, and long-term maintainability. Enhanced deployment workflows and CI/CD pipelines, reducing release friction and improving engineering efficiency.

MindTickle

2 years 1 month

SDE - I

June 2020 - June 2022 (2 years 1 month)

Pune, Maharashtra, India

Software Engineer

June 2020 - May 2022 (2 years)

Developed scalable frontend modules using React, TypeScript, Apollo, and GraphQL, enabling efficient data-driven UI development. Contributed to a shared component library, improving UI consistency and accelerating feature delivery across teams. Increased product reliability by implementing unit

and integration tests using Jest, reducing regression issues in production. Participated in modernizing legacy UI systems, improving performance and developer experience.

CogniTensor

1 year 10 months

Senior Software Developer

September 2019 - May 2020 (9 months)

Noida Area, India

Senior Software Engineer

August 2018 - May 2020 (1 year 10 months)

Architected and built data analytics dashboards and backend services using Node.js, Express, and PostgreSQL, reducing dashboard generation time by 50%. Transitioned platform architecture to containerized microservices, improving scalability and deployment flexibility. Built data processing and cleaning pipelines, improving data accuracy and system reliability. Introduced automated testing (Jest), achieving 80% test coverage and significantly reducing production issues. Optimized CI/CD pipelines, reducing build times by 30% and improving deployment efficiency.

Software Developer

August 2018 - August 2019 (1 year 1 month)

New Delhi, Delhi, India

Wrig Nanosystems Pvt. Ltd.

Software Developer

May 2017 - June 2018 (1 year 2 months)

New Delhi Area, India

Wrig Nanosystems

Software Engineer

May 2017 - June 2018 (1 year 2 months)

Developed HRMS and ERP systems using Django, automating internal business processes and improving operational efficiency. Built Android and desktop applications integrating with BLE/LTE devices, enabling real-time device communication and monitoring. Enabling operations and sales team to track sales call and data gathering seamlessly.

Education

Indian Institute Of Information Technology

Bachelor of Technology (B.Tech.), Information Technology · (2013 - 2017)

South Point School, Nagpur

· (2001 - 2011)
